

## EuroCC@Turkey Technology Transfer Offices Info

Technology Transfer Offices (TTO) aim to establish successful academy-industry collaborations within the university. In this context, it works to transform the academic knowledge and experience of universities into the benefit of the country's economy by combining them with the needs and experience of the business world.

In general, TTO activities can be listed as follows:

- Determining academic needs in the industry
- Supporting the commercialization of products / outputs resulting from academic studies at universities
- Working to meet the academic knowledge and industry needs
- Providing guidance for the legal protection of both parties in University-Industry collaborations and assisting in the arrangement of the necessary contracts.
- Following the commercialization processes of products / outputs that arise within the scope of University-Industry collaborations and conducting relevant market researches

Technology Transfer Offices basically consist of 3 units:

- **Intellectual Industrial Property Rights and Contracts:** Intellectual-industrial property right is the right that arises from the activities that arise as a result of studies in both industrial and scientific fields, and provides legal opportunities to the person who presents the idea. In order to protect these rights, the Technology Transfer Offices of the relevant universities provide support with legal guidance.
- **Commercialization:** Researching the market value of products or inventions resulting from creativity, licensing, patents, etc. to the parties in the commercialization process of the product or invention. legal support in matters, and supporting the establishment of spin-offs where necessary.
- **University - Industry Cooperation:** It is to bring companies and appropriate academic researchers together according to the needs of the industry and to provide legal and organizational support for both parties in the initiated cooperation processes.
